About NG Global

NG Global Energy Solutions is a Level 1 B-BBEE proudly South African company, established in 2017.

The company specialises in the turnkey supply of various grades of coal and other commodities including manganese and iron ore to end-users both locally and abroad among our junior mining activities.

Our services extend across the value chain and include the sourcing of the product and transporting the product via road, rail, and sea. In the instance of sea freight via FOB or CFR, our services extend to coordinating the loading of the product on the vessel to minimize delays and costs as far as possible.

To date, NG Global has exported over 6 million metric tons of various grades of coal via RBCT, Durban and Maputo ports across the globe.

Our end-users are based locally across South Africa, in Europe, India, Pakistan and China and include power generation, cement, steel and fertilizer manufacturing among others.

Our focus on quality from pit-to-port

We are committed to delivering only the highest quality commodities to our clients. Working with SANAS accredited labs, we maintain rigorous quality control measures to ensure that our products meet the requirements of various industries including cement, steel, paper & pulp, fertilizer manufacturing and power generation.

Integrity

We believe in conducting our business with the highest levels of integrity, transparency, and ethics. We value the trust our clients place in us, and we strive to maintain it through honesty and accountability in all our dealings.

Quality

We are committed to delivering only the highest quality commodities to our clients. Working with SANAS accredited labs, we maintain rigorous quality control measures to ensure that our products meet the requirements of various industries including cement, steel, paper & pulp, fertilizer manufacturing and power generation.

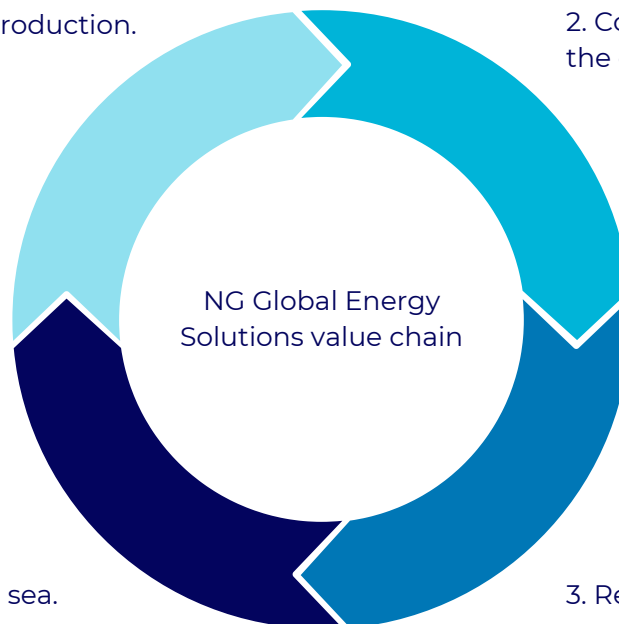

Reliability

We leverage our knowledge of global markets, logistics mechanisms, and end-use applications to ensure the timely and efficient delivery of high-quality commodities to our clients.

1. Driving resource efficient production.

2. Connecting supply & demand in the circular economy.

4. Distribution via road, rail and sea.

3. Responsible sourcing & use of resources.
